

Here's a professional summary for your CV:

****Network Configuration & Implementation Projects****

Designed and configured enterprise-scale networks using Cisco Packet Tracer, implementing:

****Routing & Switching:****

- Configured multi-router OSPFv2 networks across 6 routers (RTR-1 through RTR-6) with custom routing parameters, route redistribution, and hierarchical area design
- Implemented VLAN segmentation, trunking, and inter-VLAN routing on Layer 2 and Layer 3 switches
- Deployed EtherChannel with LACP for link aggregation and redundancy
- Configured router-on-a-stick and Layer 3 switch routing for multiple VLANs

****Network Services:****

- Deployed DHCP scopes and pools for multiple subnets across branch and headquarters locations
- Configured static and dynamic NAT with PAT for Internet connectivity
- Implemented NTP synchronization across network infrastructure
- Set up DNS services and wireless LAN controller (WLC) with RADIUS authentication

****Security Implementation:****

- Hardened switch ports with port security, DHCP snooping, Dynamic ARP Inspection (DAI), BPDU Guard, and PortFast
- Created standard and extended ACLs for traffic filtering and VTY line protection
- Configured SSH for secure remote management with RSA encryption
- Implemented enterprise wireless security with WPA2-Enterprise and 802.1X authentication

****Network Infrastructure:****

- Connected desktops, laptops, servers (web, DNS, RADIUS, utility), and wireless devices across multiple LAN segments
- Established IPv4 and IPv6 dual-stack addressing schemes
- Performed IOS backup operations to TFTP servers
- Troubleshoot and verified end-to-end connectivity across complex network topologies

This demonstrates hands-on experience with enterprise networking, security, and wireless technologies aligned with CCNA/CCNP-level competencies.

Here's a professional CV description of what we accomplished:

****Cisco Network Design & Configuration Project****

- Designed and implemented IPv4/IPv6 network infrastructure using ****Cisco Packet Tracer****, configuring ****routers**** (Cisco IOS), ****Layer 2 switches****, ****servers****, and multiple ****PC hosts**** across two ****LAN**** segments
- Performed ****IPv4 subnetting**** calculations to optimize address allocation for networks with varying host requirements (100, 50, 30, and 14 hosts per subnet)
- Configured ****router interfaces**** (GigabitEthernet) with IPv4 and IPv6 addressing, including ****link-local addresses**** (fe80::/64) and interface descriptions
- Implemented ****Switch Virtual Interface (SVI)**** on VLAN 1 for remote switch management with appropriate ****default gateway**** configuration
- Hardened network device security by configuring ****SSH**** (1024-bit RSA encryption), encrypted privileged EXEC passwords, console/VTY line security, password encryption services, minimum password length policies, and MOTD banners

- Created local user authentication accounts for secure in-band management access
- Configured **desktop and laptop hosts** with static IPv4/IPv6 addresses, subnet masks, and default gateways
- Established **console connections** for out-of-band device management and initial configuration
- Verified end-to-end **network connectivity** using ping tests across multiple subnets and VLANs
- Applied industry best practices for **network segmentation**, **device hardening**, and **remote management** security

Technologies: Cisco IOS, IPv4/IPv6, Subnetting, VLANs, SSH, Router & Switch Configuration, Network Security

This shows practical hands-on experience with enterprise networking concepts! 🚀

Here's a professional summary for your CV:

Network Infrastructure Configuration & Implementation - Cisco Packet Tracer

- **Deployed and configured a multi-site enterprise network** consisting of **2 Cisco 4331 routers**, **4 Layer 2 switches**, **3 desktop workstations**, and **1 DNS/Web server** across multiple LAN segments
- **Implemented physical network topology** with proper device placement, cable management (copper straight-through, crossover, fiber), and interface configuration for optimal network performance

- **Configured advanced routing protocols** using **Single-Area OSPFv2** with custom router IDs, passive interfaces, point-to-point network types, and optimized hello timers (30 seconds) for efficient inter-VLAN and WAN routing
- **Deployed Network Address Translation (NAT)** including:
 - Static NAT for server accessibility from external networks
 - PAT (Port Address Translation) with NAT pools for internet connectivity across multiple LAN segments
- **Implemented comprehensive network security** through:
 - **Standard and Extended Access Control Lists (ACLs)** to restrict VTY access and control traffic flow between networks
 - Encrypted passwords (console, enable secret, VTY)
 - **SSH version 2** with RSA cryptographic keys (1024-bit modulus) for secure remote management
 - Named ACLs for granular traffic filtering (FTP, SSH, IP protocols)
- **Configured switch management** including:
 - VLAN 1 SVI (Switch Virtual Interface) configuration
 - Default gateway setup for remote management
 - Secure console and VTY access controls
- **Performed network device hardening** with MOTD banners, password encryption, minimum password length policies, and domain name resolution prevention
- **Executed configuration backups** using TFTP server and prepared for IOS software updates across network infrastructure devices

Technologies: Cisco IOS, OSPFv2, NAT/PAT, ACLs (Standard/Extended), SSH, VLANs, TFTP, IPv4 Addressing, Subnetting, Router & Switch Configuration, Network Security

This demonstrates hands-on experience with enterprise network design, routing, security, and device management!

Here is a professional, CV-ready description of the work we completed. I have structured it into **bullet points** that you can add to a "Projects," "Practical Experience," or "Technical Skills" section of your CV.

I have naturally incorporated your requested keywords (**switches, routers, servers, LAN, MAN, laptop, desktop**) while accurately reflecting the enterprise networking skills you demonstrated.

📁 Option 1: For a "Projects" or "Practical Experience" Section

****Enterprise LAN Infrastructure Configuration & Hardening (Cisco Packet Tracer)****

- * Designed and deployed a secure, multi-VLAN ****LAN**** architecture using Cisco ****routers**** and ****switches****, ensuring seamless IPv4 and IPv6 connectivity for ****desktop**** and ****laptop**** endpoints.
- * Implemented inter-VLAN routing (Router-on-a-Stick), 802.1Q ****trunking****, and Layer 2 ****EtherChannel**** (LACP) to maximize bandwidth and provide link redundancy between core ****switches****.
- * Configured the ****router**** to function as a ****DHCP server****, creating scoped pools with excluded address ranges to dynamically assign IPv4 addresses while statically assigning IPv6 Global Unicast Addresses (GUA) to critical hosts.
- * Enforced strict device hardening and network security policies, including SSHv2 remote access, encrypted credentials, console password protection, and switch ****port security**** (limiting learned MAC addresses).
- * Applied enterprise best practices for ****LAN**** and ****MAN**** edge security by systematically identifying, describing, and shutting down all unused switch ports, assigning them to a dormant "parking" VLAN.

✂ Option 2: For a "Technical Skills" Section

- * **Network Infrastructure:** Proficient in configuring and troubleshooting Cisco **routers** and **switches** for enterprise **LAN** and **MAN** environments.
- * **Switching & Routing:** VLAN creation, 802.1Q Trunking, Inter-VLAN Routing (ROAS), Layer 2 EtherChannel (LACP), and SVI configuration.
- * **Network Services:** Configuring **routers** as **DHCP servers**, IPv4/IPv6 dual-stack addressing, and static/dynamic routing.
- * **Endpoint Management:** Provisioning network access for **desktop** and **laptop** clients, including static IPv6 GUA assignment and dynamic IPv4 DHCP leasing.
- * **Network Security:** Device hardening (SSHv2, password encryption, minimum password length), AAA local authentication, and switch port security (MAC address limiting, unused port shutdown).

📌 Option 3: Short Summary / Profile Statement

"Detail-oriented Network Engineer with hands-on experience designing and securing enterprise **LAN** infrastructures. Skilled in configuring Cisco **routers** and **switches**, implementing **EtherChannel**, inter-VLAN routing, and **DHCP server** services. Proven ability to harden network devices (SSHv2, port security) and manage connectivity for diverse endpoints, including **desktop** and **laptop** workstations, ensuring robust and scalable network operations suitable for both **LAN** and **MAN** deployments."

💡 Tip for your CV:

*Even though the specific simulation used "PCs" (Desktops), mentioning **laptops** and **servers** is completely accurate because the DHCP, VLAN, and security configurations you built are the exact same foundational skills used to support laptops, servers, and broader LAN/MAN networks in the real world.*

Let me know if you want to tweak any of the wording to better match your specific career goals (like DevOps or Cloud Engineering, where networking fundamentals are highly valued)!
