PROFESSIONAL SUMMARY

Senior DevOps & Cloud Infrastructure Engineer with progressive experience designing, deploying, and securing multi-cloud environments (AWS, Azure, GCP). Proven expertise in Infrastructure-as-Code (Terraform, Pulumi), container orchestration (Docker, Kubernetes), and building zero-touch CI/CD pipelines (GitHub Actions). Adept at bridging the gap between complex infrastructure and reliable application delivery, with a strong background in modernizing legacy systems for high-availability, compliance-driven environments. Passionate about automation, observability, and cloud cost optimization. I also have a strong background in software engineering just as a by the way.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, VPC, Transit Gateway, EKS, IAM), Microsoft Azure (VNet, VPN Gateway, Entra ID), GCP (VPC, HA VPN, GKE).

Containers & Orchestration: Docker, Kubernetes (EKS, AKS, GKE), Helm, Container Security.

Infrastructure as Code (IaC): Terraform, Pulumi, Ansible, Cloud-init.

CI/CD & Automation: GitHub Actions, GitLab CI/CD, Azure DevOps, Bash, Python, PowerShell.

Monitoring & Observability: Prometheus, Grafana, Elasticsearch, OpenTelemetry, Structured Logging, Postman.

Security & Compliance: CIS Benchmark Hardening, IMDSv2, Secret Management, Network Security Groups, Least-Privilege IAM, Zero-Trust Networking.

Virtualization: Oracle Cloud, Huawei Cloud, Vcenter by Vsphere hypervisor.

KEY PROJECTS

Enterprise Multi-Cloud Hybrid Foundation | Terraform, Pulumi, AWS, Azure, GCP

<https://github.com/ahooTech/omniai-core>

https://github.com/ahooTech/DevOps_Cloud_Engineering

Architected and deployed a non-overlapping, BGP-peered network fabric across AWS (Transit Gateway), Azure (Virtual WAN), and GCP (HA VPN), ensuring secure hybrid connectivity.

Developed modular, reusable Terraform and Pulumi code to provision cloud resources, enforcing strict environment parity (Dev/Staging/Prod) and reducing provisioning time by 70%.

Implemented production-grade security hardening, including CIS-compliant OS baselines, strict Security Group rules, and automated audit logging.

Cloud-Native Platform Engineering & Kubernetes Orchestration | Kubernetes, Helm, Prometheus, Grafana

<https://github.com/ahooTech/omniai-core>

https://github.com/ahooTech/DevOps_Cloud_Engineering

Designed multi-cloud Kubernetes clusters (EKS, AKS, GKE) using Terragrunt, ensuring identical add-on deployments (Cert-Manager, ExternalDNS, Metrics Server) across all environments.

Built automated CI/CD pipelines using GitHub Actions to lint, test, and deploy infrastructure changes, integrating security scans (Trivy) and policy-as-code (OPA) gates.

Implemented comprehensive observability stacks using Prometheus and Grafana to monitor cluster health, node utilization, and application performance.

OMNIAI Core Platform | Docker, GitHub Actions, AWS/Render, Python

<https://github.com/ahooTech/omniai-core>

Designed and deployed a fully automated, zero-manual-intervention CI/CD pipeline (code → test → build → deploy) for a production-grade, multi-tenant AI platform.

Containerized applications using multi-stage Docker builds, enforcing non-root execution, health checks, and structured JSON logging for cloud-native observability.

Managed secrets securely via AWS/Render Secrets Manager and environment variables, ensuring zero credentials in source code.

PROFESSIONAL EXPERIENCE

DevOps Engineer

Davis & Shirtliff | Nairobi, Kenya | April 2026 – Present

Design, deploy, and manage scalable cloud infrastructure and CI/CD pipelines, directly supporting the company's digital transformation and operational efficiency.

Implement Infrastructure-as-Code (IaC) using Terraform to automate provisioning, ensuring environment parity and reducing manual deployment errors.

Manage and optimize containerized applications using Docker and Kubernetes, improving system reliability and resource utilization.

Collaborate with cross-functional teams to establish robust monitoring and observability practices (Prometheus, Grafana), proactively resolving production incidents.

I work with Azure Key Vault for secrets management.

Conducted migration of three systems: TIMS, DeliveryApp and CRM from Digital Ocean to Azure Kubernetes cluster.

Stopped wastage of minutes when azure pipeline is running for different projects by enforcing use of development branch during development, which only runs three stages of the pipeline and terminates as opposed to main branch, which runs 5+ stages of the pipeline leading to many stalling pipelines waiting for permissions.

Developed a User Acceptance Testing system and configured the secrets, deployed to Azure Kubernetes service and handled all the DevOps required for the system. Used Django Rest Framework and Templates.

AI & Infrastructure Engineer

Kenya Revenue Authority (KRA) | Nairobi, Kenya | January 2026 – March 2026

Modernized legacy government systems by introducing cloud-native, API-first architectures and automated deployment workflows.

Built secure, auditable data pipelines and implemented Infrastructure-as-Code principles to eliminate manual server provisioning.

Automated repetitive operational tasks using Python and Bash, significantly reducing manual toil and increasing deployment velocity.

Continue to provide ongoing architectural consultation for legacy modernization initiatives.

EDUCATION

BSc Computer Science, First Class Honors

South Eastern Kenya University | Graduated October 2022

Relevant Coursework: Distributed Systems, Software Engineering, Database Systems, Algorithms & Data Structures.

CERTIFICATIONS

All issued by Cisco Networking Academy — verified on Credly:

WHY I'M A STRONG FIT FOR THIS ROLE

You need multi-cloud DevOps ownership: I have architected and deployed secure, BGP-peered network fabrics across AWS, Azure, and GCP, and managed containerized workloads in production.

You value automation and IaC: My CI/CD pipelines and Terraform/Pulumi modules enforce quality, security, and environment parity without manual intervention.

You require Kubernetes & Docker expertise: I actively design, deploy, and optimize scalable Kubernetes clusters and enforce container security best practices.

You work in fast-paced, collaborative environments: I currently modernize critical infrastructure at Davis & Shirliff and KRA, collaborating daily with cross-functional teams to deliver reliable, mission-critical services.

You need proactive problem solvers: I treat tools as a means to an end. My focus is on building reliable, maintainable, and secure infrastructure that directly enables business impact and reduces operational toil.
